material basis –
for maximum precision.**

**Semi-finished products
made of carbide**

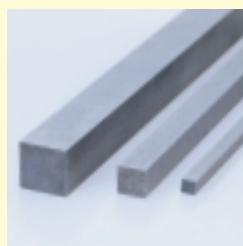

- raw material**
- preprocessed moulds**
- customised special forms**

Tungsten carbide – the material of your choice: Available in all required delivery forms

For manufacturers of precision parts and tools carbide is an indispensable material. As a specialist supplier we have ensured for more than 35 years that our customers are reliably supplied with top-quality material – true to dimensions and just-in-time.

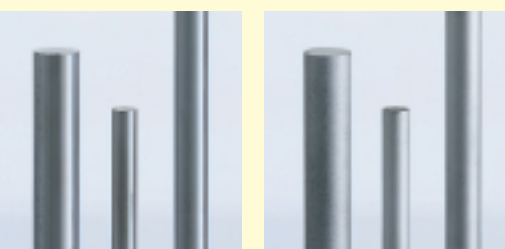

Thanks to a comprehensive main programme and efficient operating logistics we can guarantee maximum levels of availability and supply capability – greatly to the advantage of all clients who avail themselves of our services.

Large industrial companies and small craftsman's establishments benefit equally from our extensive expertise in carbide, which is at the disposal of our customers at all times: virtually all carbide products from the HHT main programme are directly available ex stock and are generally delivered to you within 24 hours.

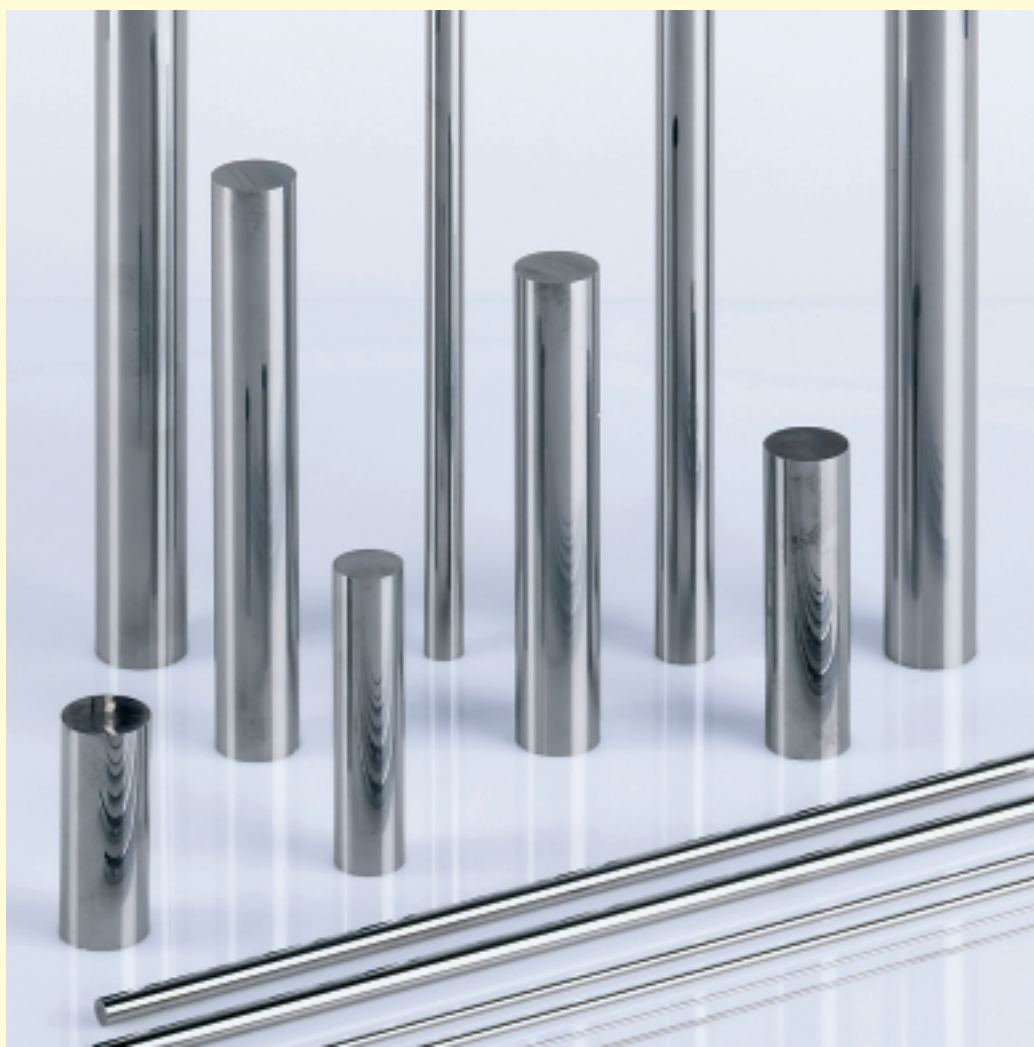

Your material basis: the HHT main programme

Round rods as well as rectangular and square rods both rough and finished, with or without straight, parallel or torsional flush holes.

All carbide parts from our main programme are available either rough and grinded.

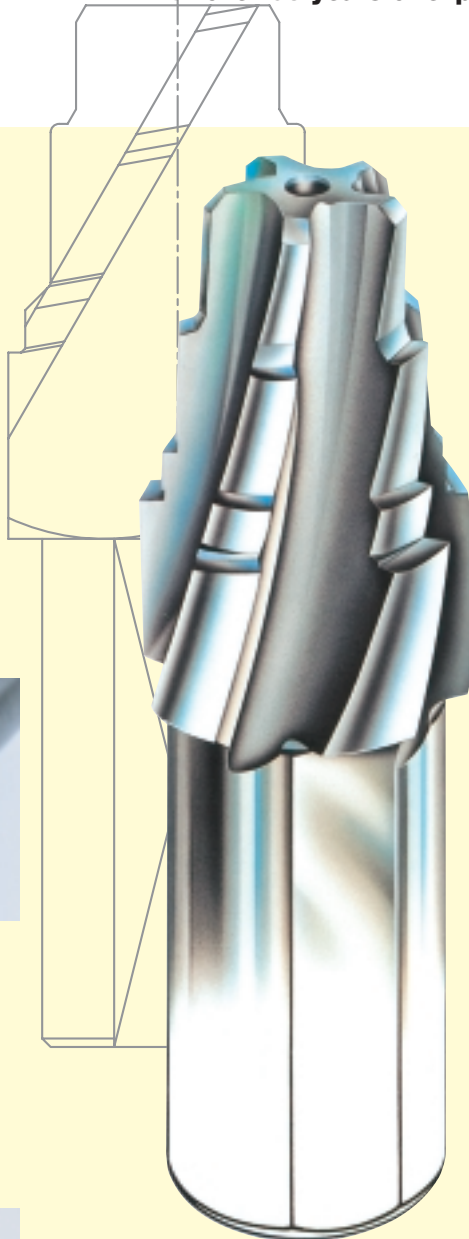

The hard facts:

- **Top quality made in Germany**
- **High availability of all semi-finished products from the main programme**
- **Carbide expertise combined with over 35 years of experience**

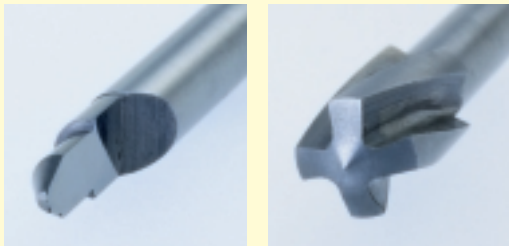

For precise results the material basis has to be right – particularly when you are hard-pressed. You can thus take advantage of a wide range of high-tech carbide types from our programme.

Based on technical drawings we also supply our customers with standard preprocessed parts from our main programme as the basis for individual fine machining and finishing.

Your skills advantage: the HHT special programme

Our range is rounded off individually by customer-specific preprocessed parts and products from the special programme: bushings, rings and punch stamps, glide ring seals, moulds, nozzles and valve seats, industrial knives, etc. as well as custom-made products based on technical drawings.

This ensures you are offered high-quality raw material and process-compatible streamlining by an expert company.

Taking a hard line on performance:

- **Short delivery times**
- **Favourable conditions in terms of cost and benefit**
- **Competent customer service**
- **Customer-specific pre-processing and fine machining**

Rock-solid, designed for high loads and with outstanding stability:

Carbide is our business and has so set performance benchmarks for our ISO-certified company for over a quarter of a century.
